

Another exciting and innovative idea from BUNN that can improve the safety of your beverage brewing process.

BUNN has worked to enhance its funnel design to further reduce the risk of injuries to food service workers who may inadvertently remove the brew funnel too soon or too quickly and splash hot liquids on their hands. Our development work led to an improved funnel design to deflect the hot liquids that may not have totally dripped out away from the person's hand.

These new patented SplashGard® funnels will come as standard equipment on all new and refurbished BUNN brewers produced after early June 2000 at no additional charge. Replacement funnels will be available only in the SplashGard® design and pricing and part numbers are listed on the back of this flyer.

We hope that you will take advantage of this new way to improve the safety of your food service operation. If you have any questions please call us at 800-637-8606.

Stainless Steel Funnel, above Plastic Funnel, left
